

01 — Problem Statement

India has **153 million gig workers** — delivery partners, auto drivers, freelancers — who power the new economy yet remain invisible to it. Their income is unpredictable, their expenses are cash-heavy, and the financial tools that exist were built for salaried professionals, not them.

PAIN POINT	REALITY
No income visibility	Earns ₹400 one day, ₹1,800 the next — no way to plan
No safety buffer	~60% have < ₹5,000 savings; one bad week = debt spiral
Financial products locked out	Banks need salary slips; NBFCs charge 36%+ APR
Govt schemes unused	PM-KISAN, PMSBY exist — but nobody knows they qualify
Financial advice is English, urban, complex	Completely irrelevant to Ramesh from Whitefield

Our User: Ramesh, 29, Whitefield, Bengaluru

Delivery partner for Swiggy. Earns ₹18,000–₹28,000/month depending on orders. Pays ₹7,000 rent, ₹4,000 fuel, sends ₹5,000 home. Has no bank savings account. Took a ₹15,000 loan from a moneylender at 5%/month. Wants to buy a second-hand bike to do more orders — doesn't know if he can afford it. **Nobody has built for Ramesh. We are.**

02 — Solution: GigShield

GigShield is a **financial resilience co-pilot** for gig workers. It automatically tracks their earnings, understands their spending via SMS, calculates a personalised safety buffer, and nudges them — in their own language — when something needs attention. Claude powers the conversational layer; the product is the intelligence underneath.

How it's NOT just a chatbot wrapper:

JUST A CHATBOT	GIGSHIELD
User asks: 'How do I save money?'	System says: 'You overspent fuel by ₹240 this week. If you cap at ₹600 next week
Generic financial advice	Personalised to Ramesh's actual income variance, spending history, household o
Works only when user opens the app	Proactive alerts: 'Your earnings are 30% below your weekly average — consider t
Tells user about PM-KISAN	Checks eligibility against their profile, shows the application link and what docum

03 — Features & Capabilities

Auto Earnings Sync

Swiggy/Zomato API integration (mock for demo, hooks ready for prod). Fallback: user pastes screenshot or types quick log. No manual entry needed in steady state.

SMS-Based Spend Tracking

Parses bank SMS alerts (HDFC, Axis, SBI format) to auto-categorise: Fuel, Food, Rent, Transfer, Other. Claude handles ambiguous entries. Works for any Indian bank.

Safety Buffer Calculator

Analyses 30/60-day income variance. Computes personalised emergency fund target. Real-time score: 'You're safe for 14 days. Goal: 30 days.' Gamified progress bar.

Proactive Alerts & Nudges

Detects anomalies (low earnings week, fuel overspend). Simulates big purchases: 'If you buy the bike today, your safety drops to 6 days — wait 12 more days.' Weekly digest with wins and warnings.

Govt Scheme Eligibility

Cross-checks income profile against PM-KISAN, PMSBY (₹330 life insurance), PMJJBY, Ujjivan microloans. Shows: 'You qualify. Here's what you need.'

Loan Matching Display

Scrapes/displays 3-4 microfinance options. Compares APR, tenure, eligibility. No auto-fill (scope for v2). Gives Ramesh the information to walk in confident.

Vernacular Conversational UI

Hindi and Kannada via Claude + browser Web Speech API. Ramesh says 'Kal kitna kamaya?' — GigShield responds in his language with his data.

Feature Map

04 — User Flow

User Journey — GigShield

- 1. Onboard:** Ramesh installs the PWA. Connects Swiggy account (or grants SMS read permission). Sets household obligations: rent ₹7,000, home transfer ₹5,000.
- 2. Auto-Sync:** Earnings pull automatically every evening. Bank SMS parsed in background. Ramesh does nothing — data flows in.
- 3. Dashboard:** He sees: Today ₹1,240 | This week ₹6,800 | Safety buffer: 11 days (₹ target 30). Fuel spend: ₹520 (85% of weekly cap).
- 4. Alert fires:** Thursday: 'Fuel spend ₹640 — ₹40 over cap. Skip 2 deliveries tomorrow or refuel outside peak zone to stay on track.'
- 5. Big purchase:** Ramesh taps 'Planning a purchase'. Types 'Used bike ₹22,000'. GigShield: 'Safety drops to 4 days. Work 18 extra days to fund it safely — or apply for Ujjivan bike loan at 18%.'
- 6. Scheme win:** GigShield flags: 'You qualify for PMSBY — ₹2 lakh accident cover for ₹20/year.' One tap to see how to apply.

05 — System Architecture

System Architecture — GigShield

Claude's Role (not a wrapper):

- Intent parsing: 'Phone kharidna hai' → triggers purchase simulation flow
- Nudge generation: given financial data, writes contextual, empathetic alerts in Hindi/Kannada
- SMS disambiguation: 'Swiggy Technologies' debit → earnings, not expense
- Scheme explanation: converts govt jargon into plain-language eligibility summaries
- Safety narrative: turns numbers (14 days buffer) into actionable human language

06 — Technology Stack

COMPONENT	TECHNOLOGY	ROLE	COST
LLM / AI	Claude Sonnet (Anthropic)	Intent parsing, nudges, explanations	Free credits
Backend	Python + FastAPI	API, financial logic, orchestration	Free
Frontend	React + Tailwind CSS	Dashboard, charts, chat UI	Free
Voice I/O	Web Speech API (browser)	Hindi / Kannada voice input	Free
Earnings Sync	Swiggy / Zomato API (mock)	Auto earnings ingestion	Free
SMS Parsing	Regex + Claude	Extract bank transactions from SMS	Free
Hosting	Vercel (frontend) + Render	Deploy & demo	Free tier
Govt Scheme DB	Static JSON + web scrape	PM-KISAN, PMSBY, Ujjivan eligibility	Free

07 — Why We Win the Judging Rubric

CRITERION	MAX	WHY WE WIN
Impact Potential	25 pts	153M gig workers in India; 0 tools built for income-volatile earners
Technical Execution	30 pts	Real data pipeline, financial math, Claude API, voice I/O in one day
Ethical Alignment	25 pts	Informs, never decides; regional language; no data sold; open source
Presentation	20 pts	Live demo with realistic data, clear user journey & quantified impact
TOTAL	100 pts	Built to win every rubric.

08 — Ethical Framework

Empowers, never decides: GigShield shows Ramesh what he can afford and what the risks are. The decision is always his.

No financial advice liability: All outputs are labelled as informational. Crisis states (debt spiral) escalate to NGO helplines.

Data minimalism: SMS parsed on-device where possible. No raw SMS stored. Earnings data encrypted at rest.

Accessibility first: Voice-first for low-literacy users. Works on 3G. Hindi + Kannada launch; 8 languages in roadmap.

Bias awareness: Scheme eligibility rules sourced from official govt portals only. Income variance thresholds tested across gender and city-tier profiles.

No dark patterns: No loan referral commissions. No nudges designed to increase engagement over user wellbeing.

"Talent is universal. Opportunity is not."

GigShield doesn't replace financial advisors — Ramesh can't afford one and never will. It gives him the intelligence that an advisor would give, in his language, from his data, at exactly the moment he needs it. That is the promise of AI done right.
